

## AMENDMENTS TO THE ABSTRACT

**Please amend the Abstract of the Disclosure as follows:**

A golf ball retrieval tool comprising ~~including~~ an elongate elongated handle which carries at one end a so-called cage. ~~The cage which has at its rear end that faces towards the handle~~ a first section located near the elongated section and ~~at a part distal from said handle~~ a second section located distally from the handle and connected to the ~~which connects with said first section,~~ wherein in a first cage orientation of the tool ~~the~~ The first cage section has a first opening opened in a ~~an opening edge which, in said first tool orientation, is generally open downwards and rearwards towards the handle and which is able to freely receive a golf ball,~~ wherein a transit opening connects the first section with the second section, ~~wherein the~~ The second section includes a downwardly open second opening which forms a ball seating, ~~wherein, with~~ When the tool is in said the first cage orientation, the handle extends obliquely downwards beneath the horizontal plane of the cage, ~~and wherein the transit opening between said first and said second sections forms a threshold over which the ball must run.~~ The cage ~~comprises~~ further includes a roof structure which in response to pressing the cage generally vertically against a ball, ~~which as a result is received in the first section, when the tool is in said first cage orientation, generates on the ball a wedging action such as to drive the ball through the transit opening and into the second section where the ball can be received in the ball seating.~~
